Sliding Door Soft Closer

60kg OK

This external type of soft closer can be installed on existing sliding doors. This door damper will catch closing doors ±50 mm before the thud and then softly and silently close them. Thus, it reduces the unpleasant noise of the door hitting the frame and prevents the door from bouncing back. The door will close perfectly without any gap regardless of the strength or speed adjusted during installation. Compared to conventional products, this soft closer has twice better durability (passed 500,000 times operation tests).
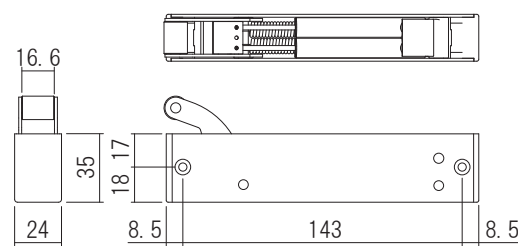

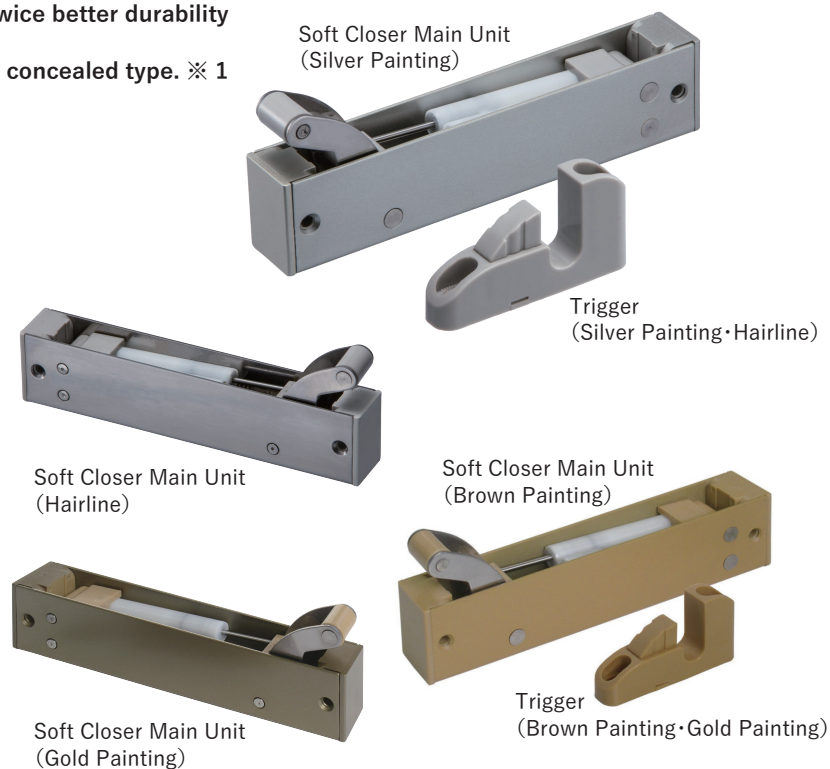

It is also possible to modify this product to a concealed type. ※1

Concealed Soft Closer

25kg OK

This is a door damper for an indoor bottom-running sliding door. It will slowly pull the sliding door from about 80mm before the end, and then it will close slowly and quietly. The door will close completely without any gap regardless of the strength adjusted during the installation. As this product is a concealed type, it will not disintegrate the architectural appearance. In addition, this soft closer has also passed 200,000 times operation tests which guarantee long-term use.
